STATION MAP

Width is measured across the complete outline. Bottom and deck heights share one datum.

Thickness is the difference between deck and bottom at each longitudinal station.

These values describe the digital design; verify dimensions before shaping or machining.

SEVEN CONTROL CROSS SECTIONS

Profiles use one common scale. Positions are measured from the tail.

The listed width and thickness values, not the printed drawing, are authoritative.

DRAWING NOTES

Cross sections share one profile scale.

Rail ratio is deck / bottom.

Transition follows the actual rail curve.

Tail and nose stations are near the tips.

Check dimensions against the digital model.
